

The Italian Soft Mobility Atlas

A collaboration of the Italian Soft Mobility Alliance (AMODO) and Rete Ferroviaria Italiana (RFI)

Luigi Contestabile (RFI)

Giulio Senes (AMODO)

11th European Greenways Award

International Conference on Greenways and Sustainable Tourism

Rome, 20th November 2023

Members of the Alliance

The Memorandum of Understanding

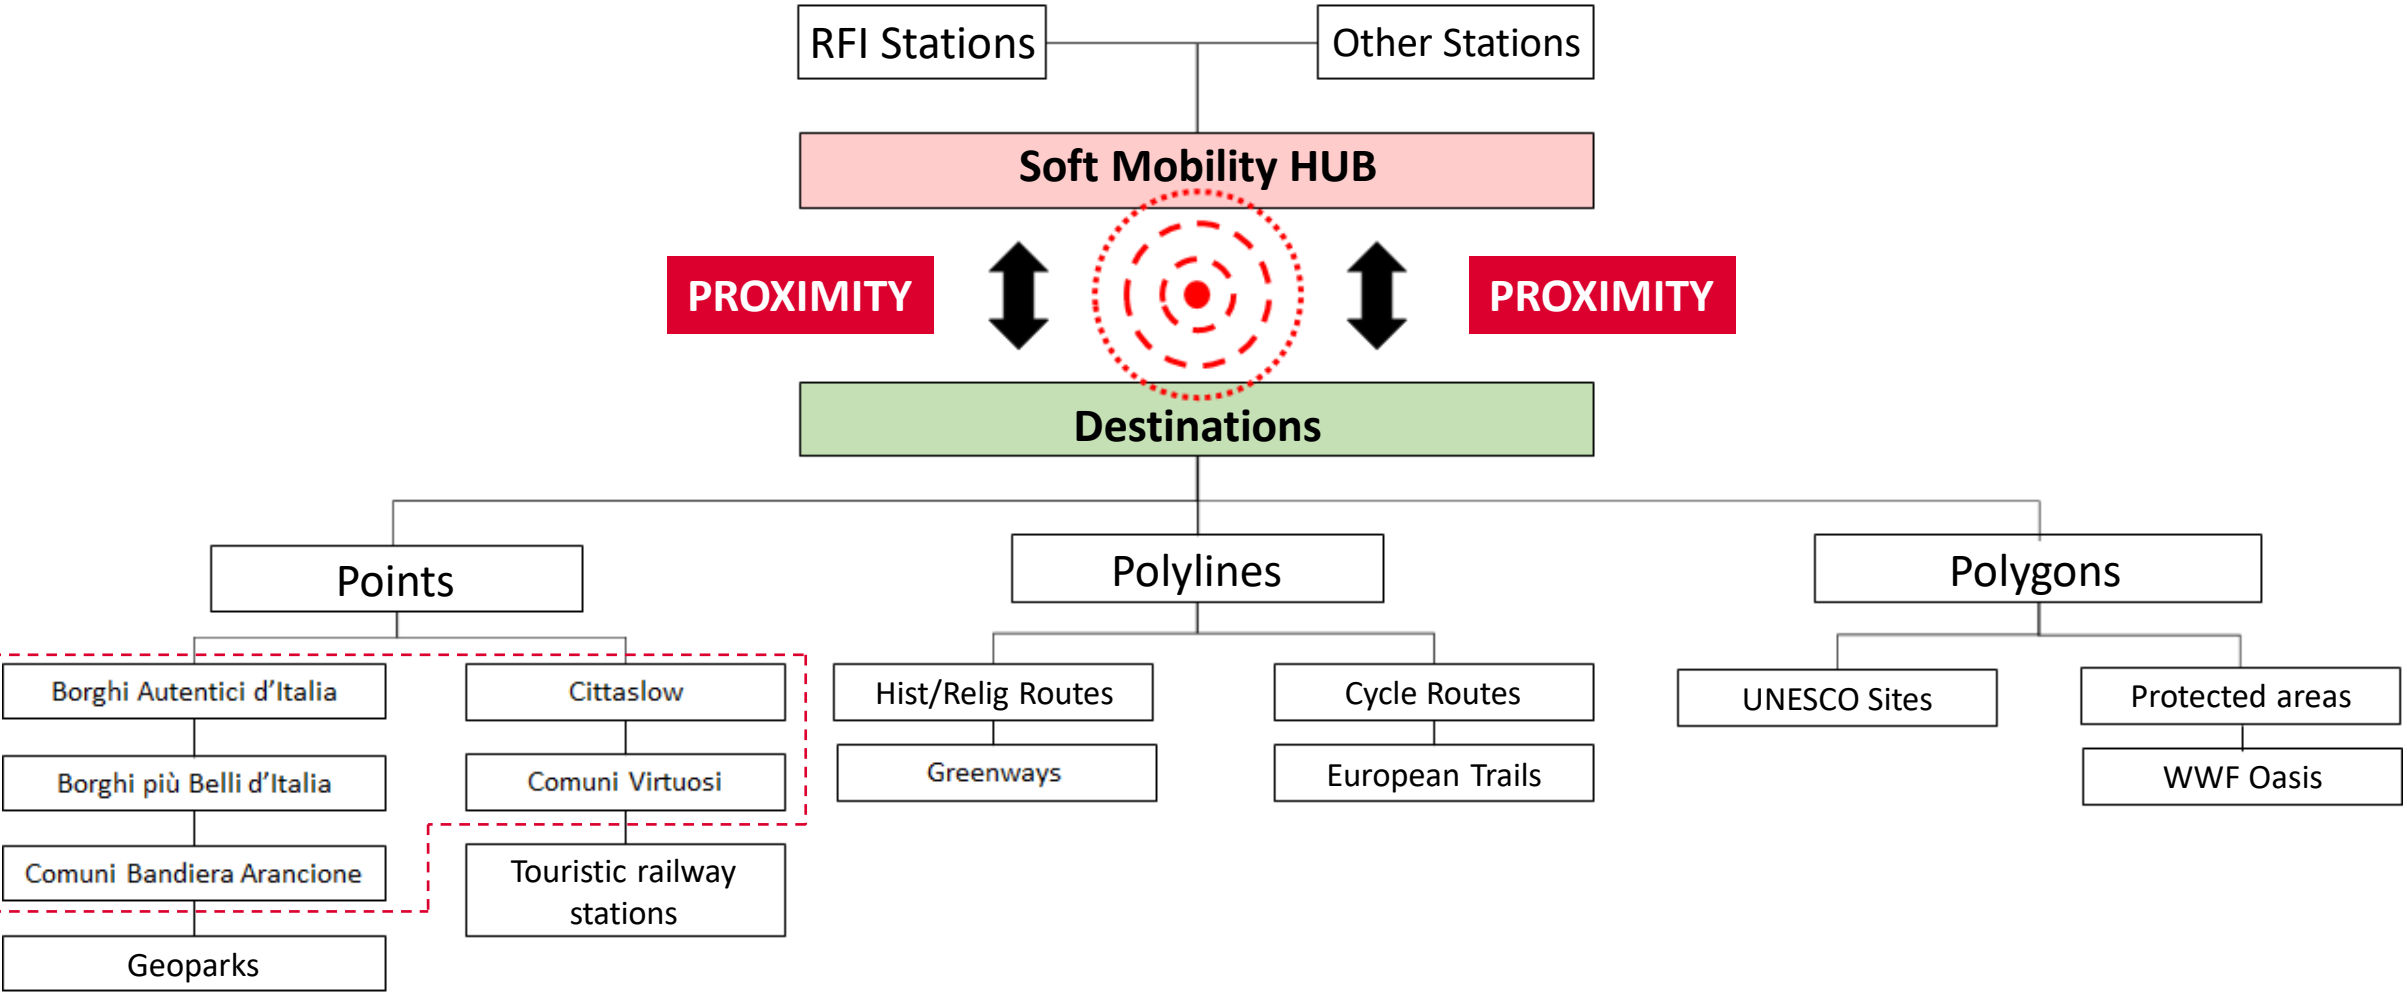

Goals

- To systematize information and knowledge on **soft mobility infrastructures** and on **destinations** in Italy
- To identify through spatial analysis techniques the possible **synergies** between the components of the system (**infrastructures and destinations**), as a tool for orienting and supporting decisions
- To define paths for the development and promotion of an **Integrated Soft Mobility System**
- To identify the **railway stations** that can be developed as **Soft Mobility HUBs**

Recipients

- **Institutions** and **Local Authorities**, to develop projects and solutions, as well as mobilize new resources to promote sustainable mobility and tourism
- End users (**citizens**), to disseminate and promote sustainable mobility and tourism

Creation of thematic maps from data analysis

Resources

STU	383	Touristic railway stations (28 Lines, 1.618 Km)
BOR	900	Networks of historical villages (Bandiere Arancioni, Borghi Autentici d'Italia, Cittaslow, Comuni Virtuosi, Borghi più Belli d'Italia)
MDP	12 000	km of European Trails
	84	Historical/Religious Routes (24.000 km)
AP	1 661	Protected areas (100.000 Km²)
UNE	55	UNESCO Sites (5.700 Km²)
MDB	18 000	km di Cycle routes and greenways

Railway stations

3 029 railway stations

● 2 057 RFI stations

○ 972 Other stations

Calculation of proximity indices

Area of influence (AI) - Based on the **average reference speed** and the time considered optimal (**30 minutes max**) for accessing the resources starting from the station.

Considering soft mobility as a type of active mobility for people with any skills and abilities, two reference speeds were assumed:

- 4 km/h for pedestrians → AI = **2 km**;
- 8 km/h for cyclists → AI = **4 km**.

Proximity indices calculated based on the distance between each element and the railway stations.

$$I_{VIC_i [0-1]} = \sum_i \frac{[1 - (Dist_{Infl} + Toll)]}{Max_i}$$

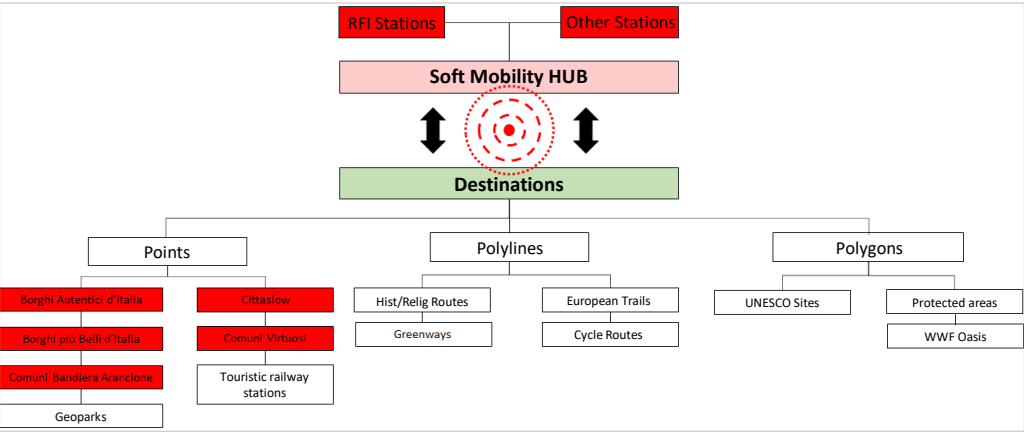

Tema/Indice	Elementi d'interesse	Geometria	Area d'influenza	Tolleranza
Soft Mobility Walking	Hist/Relig Routes	Polyline	2 km	+1 km
	European Trails			
	Italian National Trail			
Soft Mobility Cycling (routes > 10 km)	Greenways	Polyline	4 km	+1 km
	Eurovelo			
	Italian Touristic National Cycle Network			
	Italian National Cycle Network (Bicitalia)			
Italian networks of historical Villages	Bandiere Arancioni	Polygon (500 m within the point)	2 km	+0.5 km
	Borghi Autentici d'Italia			
	Cittaslow			
	Borghi più belli d'Italia			
	Comuni Virtuosi			
UNESCO Sites	Siti Unesco con ingresso	Point	2 km	+0.5 km
	Siti Unesco ampi con ingresso	Polygon	2 km	
	Siti Unesco ampi senza ingresso	Polygon	0.5 km	
Protected areas	EUAP Protected areas	Polygon	0.5 km	+0.5 km
	SCI <small>(Site of Community Importance)</small> and SPA <small>(Special Protection Areas)</small>			
	WWF Oasis			
	Geoparks	Point	2 km	+0.5 km
Touristic railways	Touristic railway stations	Point	0.5 km	+0.5 km

Stations and historical villages

3 029 stations (of which 2.057 RFI)

296 stations (10%) are close to a village

- 190 RFI stations (of which 10 close to 2-3 villages)
- 106 Other stations (of which 17 close to 2-3 villages)

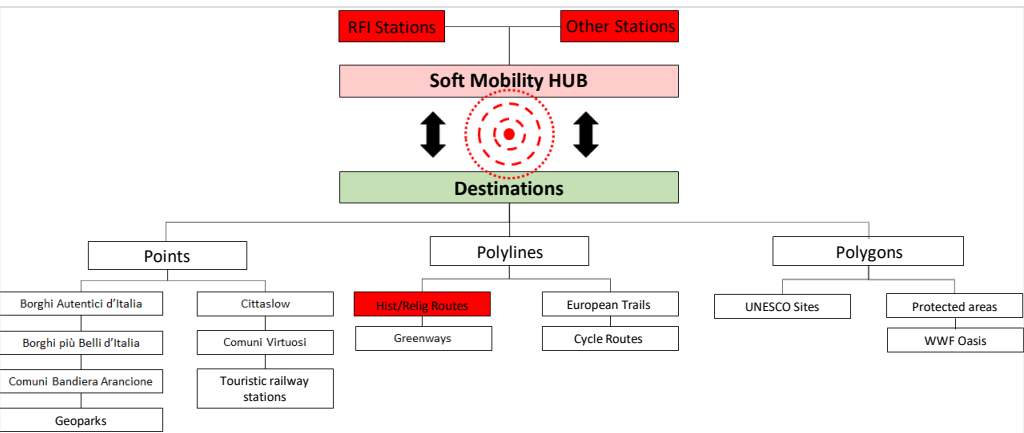

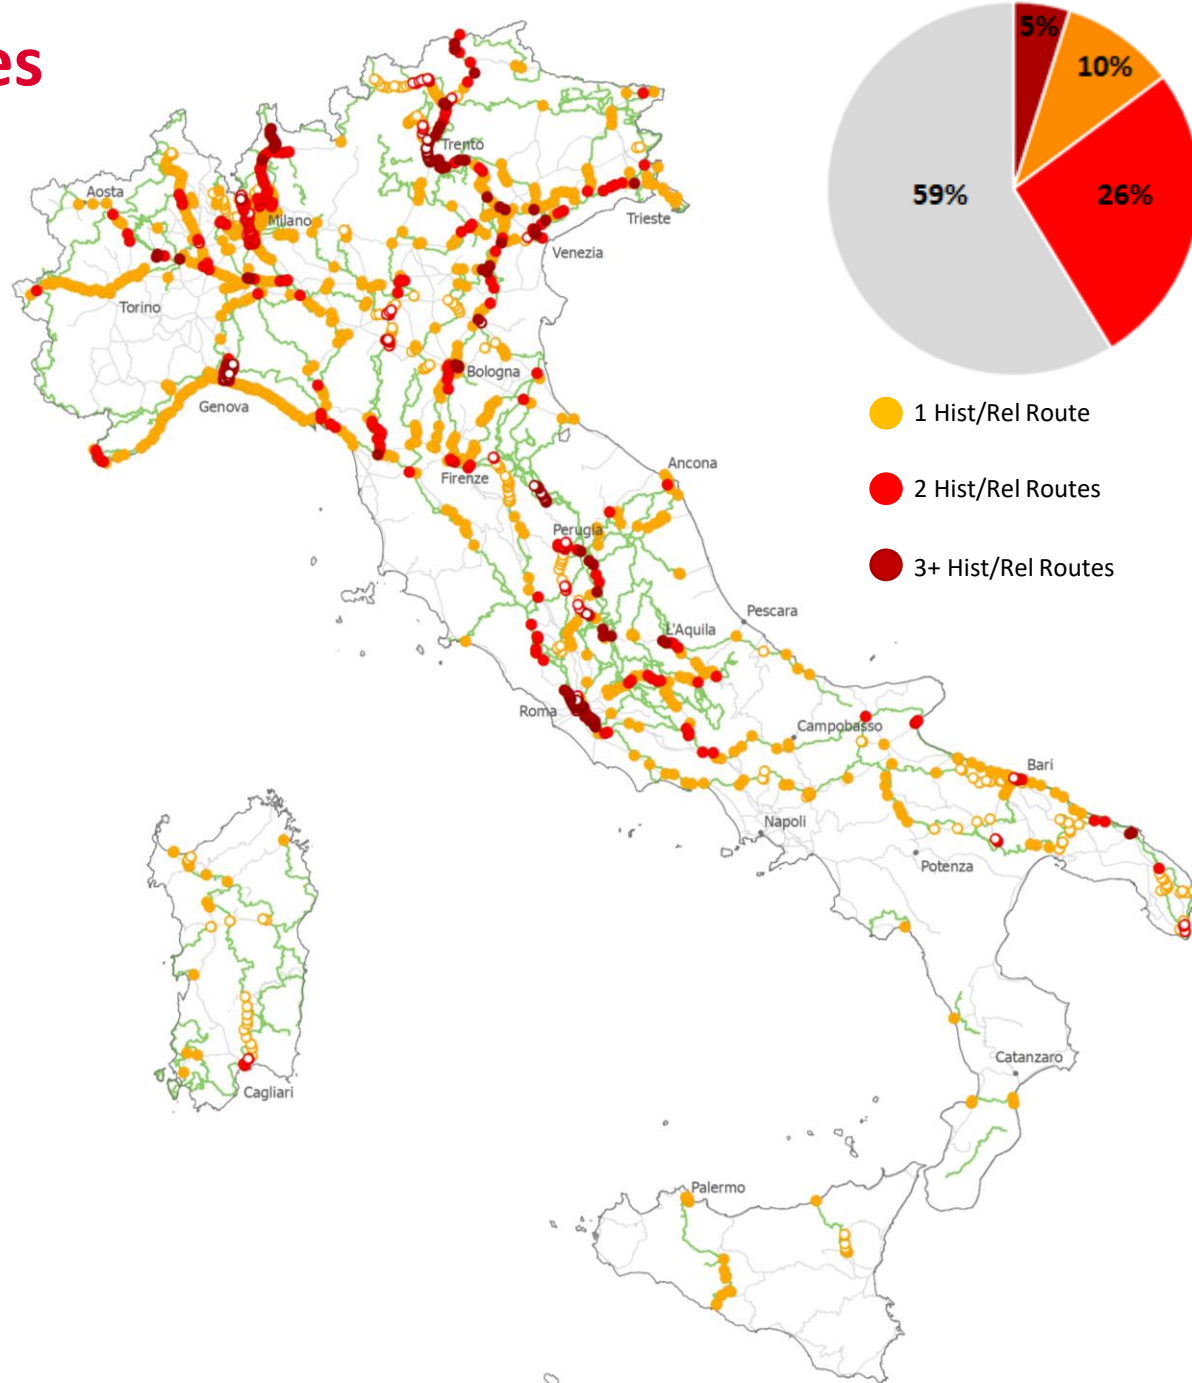

Stations and Historical/Religious Routes

3 029 stations (of which 2.057 RFI)

1 249 stations (41%) are close to at least a Historical/Religious Routes

- 800 stations close to 1 Hist/Rel Route
- 301 stations close to 2 Hist/Rel Routes
- 148 stations close to 3+ Hist/Rel Routes

Stations, greenways and cycle routes

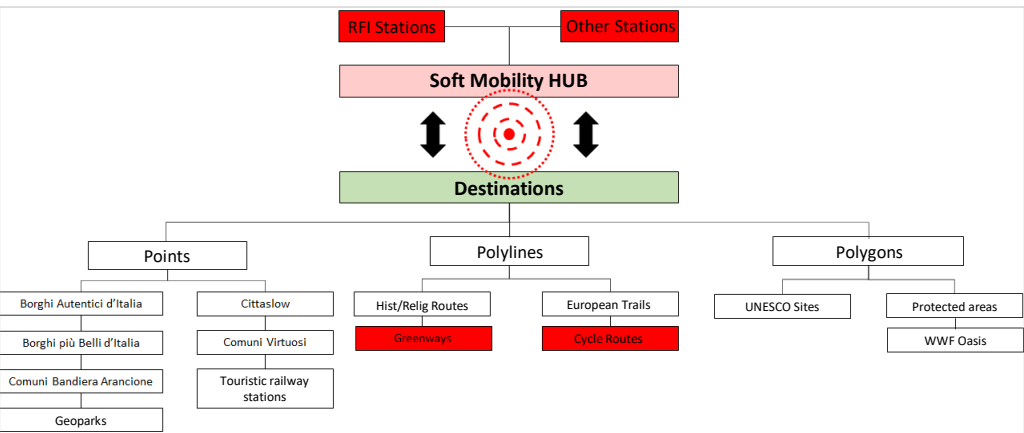

3 029 stations (of which 2.057 RFI)

1 830 stations (60%) are within 5 km from a greenway or a cycle route

● 1 237 RFI stations ○ 593 other stations

Among these, 1 478 (49%) are within 2.5 km from a greenway or a cycle route

● 1019 RFI stations ○ 459 other stations

Stations, villages, routes and paths, greenways and cycle routes, protected areas and Unesco sites

3 029 stations (of which 2.057 RFI)

124 stations (4%) are close to villages and soft mobility infrastructures

● 82 RFI stations ○ 42 other stations

47 of which are close to a protected area too

● 35 RFI stations ○ 12 other stations

3 of which are close to a UNESCO site too

● 3 RFI stations ○ 0 other stations

Scenic Railways

3 029 stations (of which 2.057 RFI)

1 076 stations (36%) are along scenic railways

● 673 RFI stations ○ 403 other stations

670 of which (22%) are situated in areas with a population less than 100 000 inhabitants and close to a soft mobility infrastructure

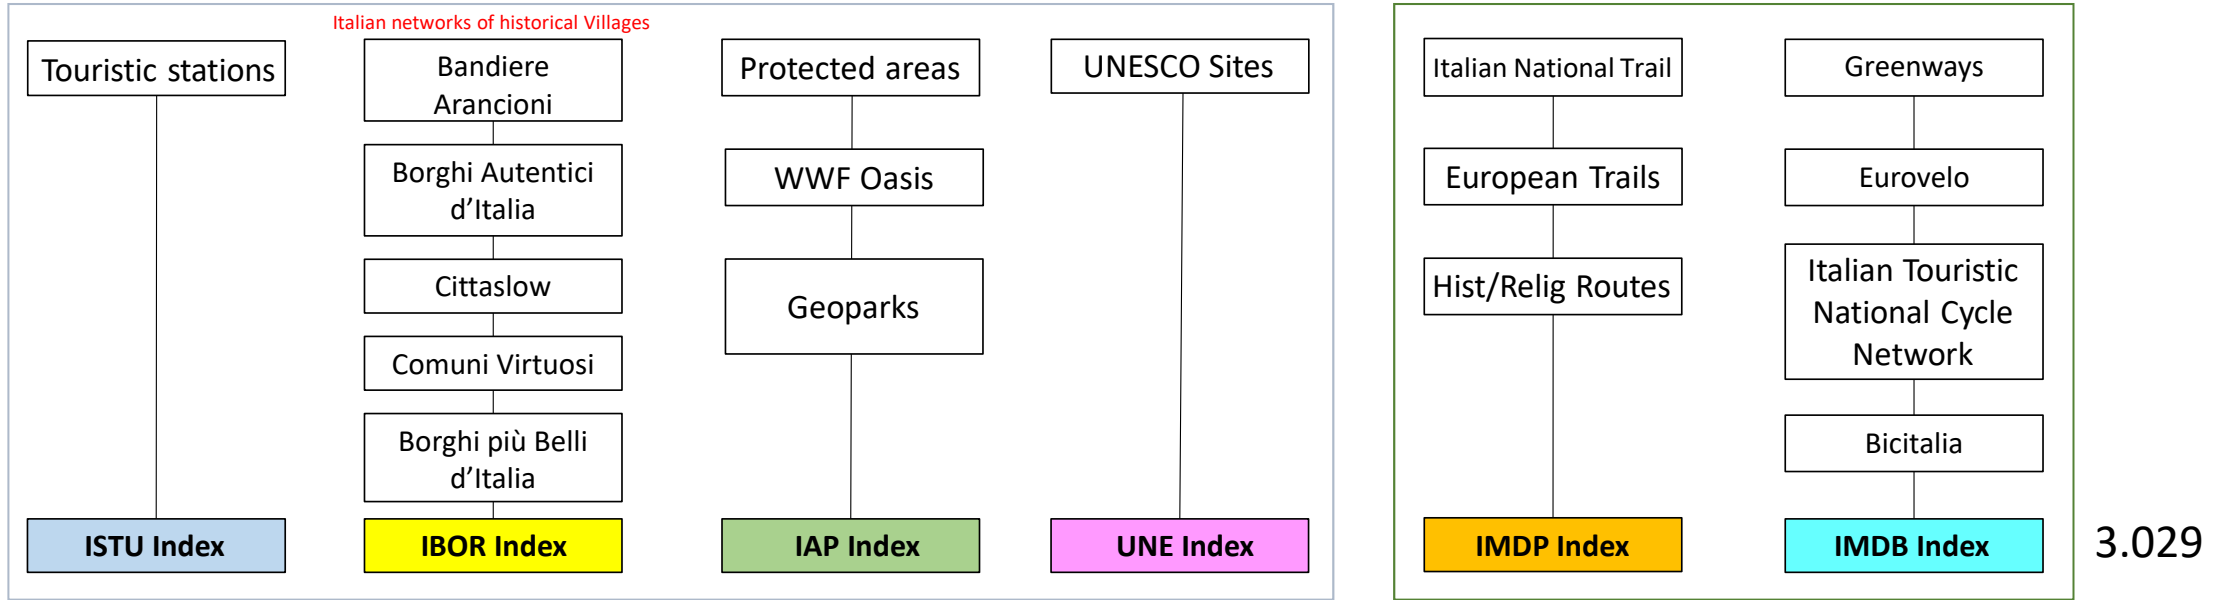

● 419 RFI stations ○ 251 other stations

The “**Scenic Railways**” are the **50 active railway lines** characterized by a high quality of the landscape crossed, visible directly from the train window. These are the railway sections that pass within 300 m from protected natural areas, UNESCO sites, highly natural land uses, or within 100 m from the coastline.

Overall Soft Mobility Index (IMD_{ST})

Proximity Calculation

Filtering for population

Scenic Railways → Extra score

Weighting

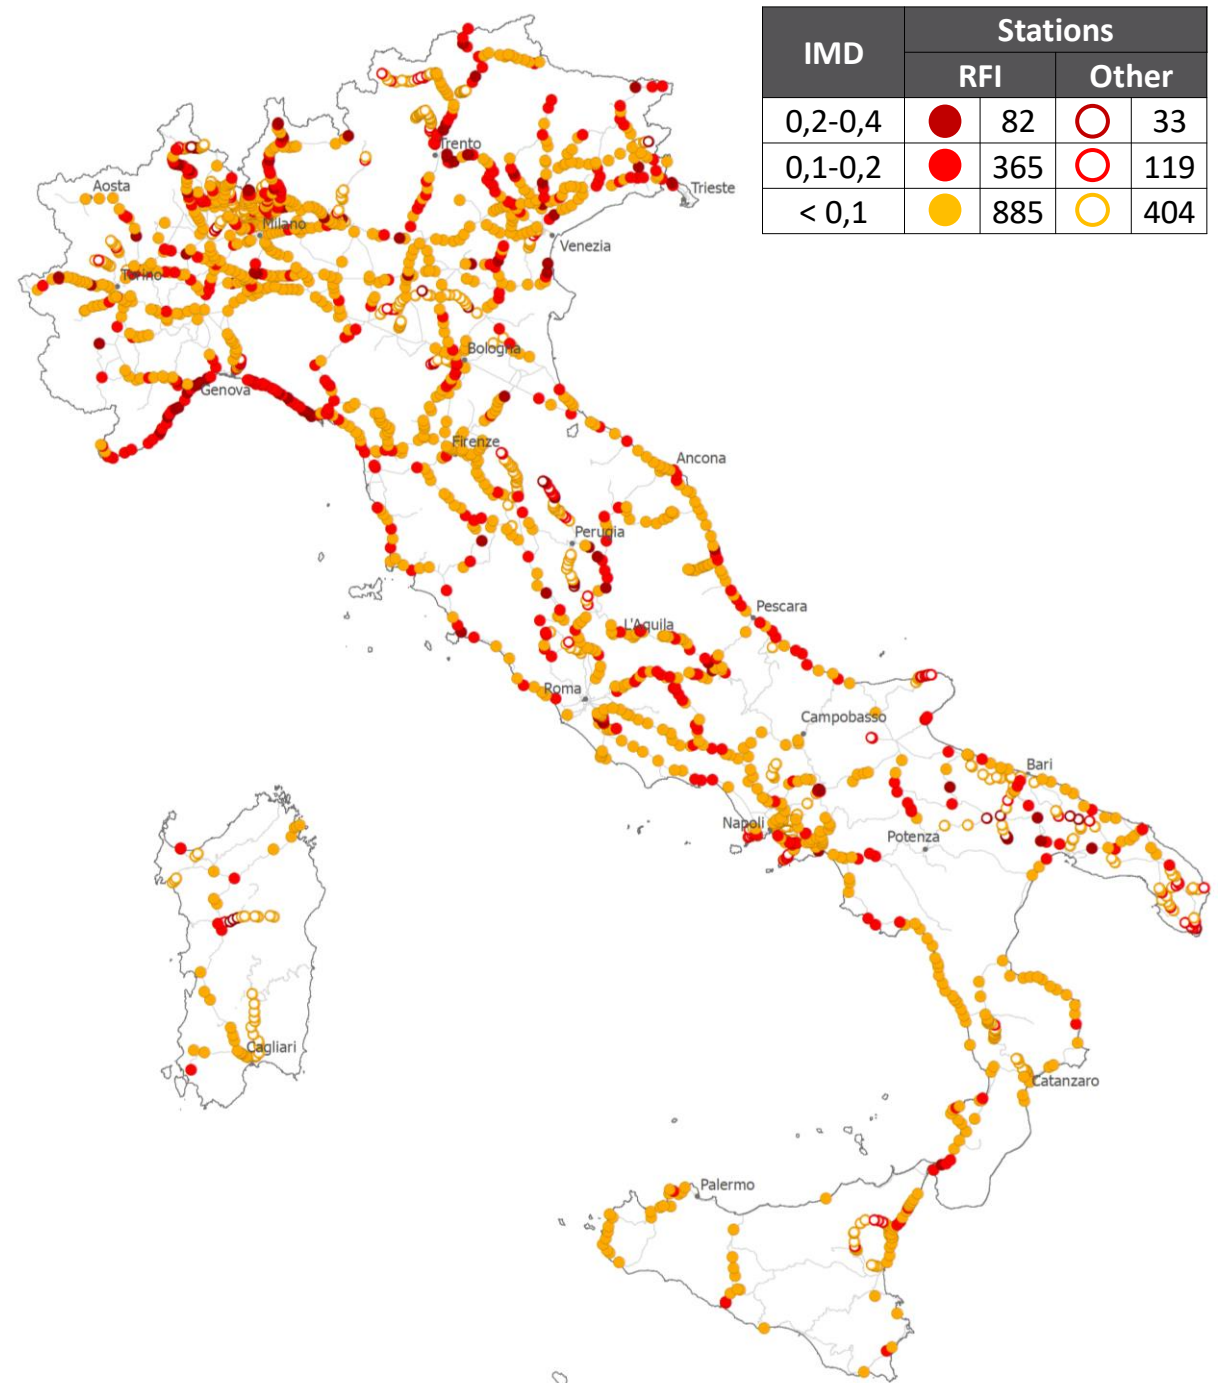

$$IMD_{ST} = [(P_{ISTU} \times ISTU) + (P_{IBOR} \times IBOR) + (P_{IAP} \times IAP) + (P_{IUNE} \times IUNE) + (P_{IMDP} \times IMDP) + (P_{IMDB} \times IMDB)] + (V_{PAES[0-0,05]})$$

Weighting

3 029 stations (of which 2.057 RFI)

1.888 stations (62%) are in municipalities with less than 100 000 inhabitants and with IMDP or IMDB > 0

● **1.332** stazioni RFI ○ **556** altre stazioni

Web-GIS

The **Web-GIS** is available on the AMODO (www.mobilitadolce.net) and RFI (www.rfi.it) internet sites.
